1. **In general, we'd like to confirm the use of the 67:61 SDLRC Rule:**

   Yes, services delivered are expected to be in compliance with Administrative Rules of South Dakota (ARSD) Article 67:61 Substance Use Disorders, in addition to contractual and billing requirements.

2. **Our hospital currently operates SUD programming at a 2.5 level of care. Is the intent of this funding mechanism to move all current services to 3.7 (in addition to new services), or might there be some new services at a 3.7 level of a care while others remain at the 2.5 level?**

   The intent of this funding is to support an expansion of services for level 3.7 intensive inpatient services for the budgeted amount of $1,257,037, detoxification services for the budgeted amount of $406,842, and intensive methamphetamine treatment services for the budgeted about of $1,257,037.

3. **What is the required staffing ratio/matrix for grant activity?**

   Staffing requirements of accredited/contracted substance use disorder treatment providers are outlined in ARSD 67:61:04:09, found here: https://sdlegislature.gov/Rules/DisplayRule.aspx?Rule=67:61:04:09.

4. **Will the detoxification portion of the budget fall within the residential program or does the State anticipate using inpatient beds for this** component?

   Detoxification services would be budgeted separately from the intensive meth treatment and the inpatient treatment components.

5. **Is the State planning to offer IMT training (or other related trainings) in the next 12 months or shall we budget for outside training?**

   The Division of Behavioral Health will offer training for evidence-based models utilized by IMT services.

6. **Do we have to submit to offer all three levels? or can we apply to offer detox and/or the meth program and not 3.7?**

   Because of the current gap in 3.7 services as well as IMT and detox services in the Northeast Region, the ideal offer would include a program that is able/are able to provide all services identified in section 3.1.
